Music Intro:

Episode # 5 for August 1, 2007

Show Title: Internet Browsers, Some safe guards for surfing the Internet, Keep an eye on your children's internet activities.

Notes: Remember Internet Explorer 7 is not the only web browser on the internet.

- Internet 7.0 Free <http://www.microsoft.com/windows/products/winfamily/ie/default.msp>
- Firefox 2. Free <http://www.mozilla.com/en-US/firefox/>
- Opera 9 Free??/ I'm not 100% sure <http://www.opera.com/>
- Safari 3.0 Free <http://www.apple.com/safari/>
- Netscape Navigator 9.0 Free <http://browser.netscape.com/>
 - Discuss the problem with websites that are looking to phish you and get your critical data or personal information.
 - Discuss how most of the exploits that are embedded in web pages seem to go after the most common browser Internet Explorer.
 - Discuss how much better Netscape used to be over IE and how the big company crushed the innovative, and exciting Netscape.
- Explain why if you're using Internet 6.0 or lower, your open to a host of viruses, and exploits that are common knowledge on the internet, one wrong page and your computer is infected
- Also explain how to prevent issues by changing browsers all together.

- Use foxfire for surfing the internet for fun, and other things, only use IE if the website won't work with any other browser.

School is now in session:

- With school just around the corner for kids, I thought I would be a perfect time to discuss internet safety.
 - You may ask yourself why you need to watch your child, it's not your child most times, it's the person on the other end that you need to be aware of
 - Pedophiles
 - Social networking sites MySpace, bebo, facebook
 - Safety
 - Place your desktop computer in an open area, where you always can see what's going on.
 - Set time limits, that way kids who have a lot of time on their hands don't into more trouble just wondering
 - Have your child tell you why they need to get on the internet and the reason they have been on so long
